ASSEMBLY PART NO. (Un-Wound)	COLOR CODE	MAGNETIC MATERIAL(1)	FREQUENCY RANGE(2)	MATERIAL PERMEABILITY	ASSEMBLY AL nH/turns ² (3)	MAX µh 100 turns	MIN µh (4) 100 turns	TEMPERATURE STABILITY(5)
L30-53-BT-F-5	None	FERRITE 53	.05-2.0 MHz	44	10.4	104	44	1500 ppm/°C
L30-54-BT-F-5	None	FARRITE 54	2-200 MHz	25	14.8	148	71	1500 ppm/°C

- 1) The ferrite materials are used in the tuning core and cup core.
- 2) This represents the frequency range for Q optimization in tuned or resonant circuits. The inductive properties of the material is effective over a considerably wider frequency range.
- 3) Nanohenries (10⁻⁹ Henries) per turn squared.

- 4) The minimum inductance is measured in microhenries (10°6 Henries) per 100 turns with the tuning core tuned out of the winding area but still a part of the assembly.
 5) The temperature stability is of the magnetic material, measured in parts per million per degree
- 5) The temperature stability is of the magnetic material, measured in parts per million per degree Celsius (ppm/^OC) on a toroidal core and winding. This is only an indication of the temperature stability for a complete wound assembly.

^{(6) &}quot;The base and coil form are one piece molded in Polymethylpentene (PMP). The 5 terminals are brass .02 inches (0.5mm) in diameter,100% tin plated to meet MIL-STD 202 method 208 for solderability.
7) The ferrite tuning cores is 3.3mm metric, shallow thread.

8) The base has a cavity for an optional capacitor .236 [6mm] Long x .08 [2.1mm] Wide x .08 [2.1mm] Deep Capacitors are not included.
